Alyna Palamarchuk - Full-Stack Software Developer

Houston, Texas, United States | (281) 979-4140 | alynapchuk@gmail.com
alynapchuk.com | linkedin.com/in/alynapchuk | github.com/alynapchuk

Positive and problem-solving full-stack software developer driven to building strong teams and investing in the people around me. Seeking an opportunity with a growing organization which will allow me to apply and expand my knowledge in software development.

Skills

- Python
- HTML
- CSS
- JavaScript
- jQuery
- Node.js
- Express
- SQL
- Sequelize
- React
- React Native
- Cypress
- RESTful API
- Redux
- AWS

Education

- **DigitalCrafts** | *Certificate in Full-Stack Software Development*   May 2021 – Aug 2021

Software engineering training program covering full-stack development including, but not limited to JavaScript, Python, and server-side technologies such as Node.js, Express, and PostgreSQL.

Portfolio

- **Otter** | github.com/alynapchuk/otter   Aug 2021

Otter was designed to be the perfect app for you and your significant otter. It was built using React Native, Redux, and FirebaseDB and the purpose behind the app is to provide healthier and more understandable ways to communicate in a relationship.

- **GitHired** | github.com/alynapchuk/git-hired-app   Aug 2021

GitHired is the first solo-project that I have had the opportunity to develop. It is a full-stack application using React, including a client and separate proxy for the server. Using the FindWork Jobs API, the app provides the user a list of all current software development job openings, and also includes a search feature that allows filtering through parameters for jobs.

- **Archer** | github.com/alynapchuk/archer   July 2021

The Archer application was a back-end project developed by my group using Node.js and express, as well as other middleware for functionality. The purpose of Archer is to provide an itinerary to organize parks and bookings for the user to plan their next adventure.

- **Deto No Yoru** | detonoyoru.netlify.app | github.com/alynapchuk/DetoNoYoru   Jun 2021

This webpage was designed and developed by my group as another front-end project for the DigitalCrafts bootcamp to showcase the skills and knowledge we have developed in HTML, CSS, and JavaScript.

- **Marvel Showdown** | github.com/alynapchuk/lucky_seven   May 2021

Marvel Showdown was built using Python and is a simple battle game where the player can choose their fighter as well as their enemies, getting their moves and functionality from classes and instances. It was the first project that I worked on with a group from DigitalCrafts.

Work Experience

- **ConnectSource Solutions** | *Accounting Assistant*   Nov 2020 – May 2021

Supported accounting procedures and processes by ensuring incoming forms of payment were appropriately applied to accounts payable and other accounting functions. Verified expense reports and transactions following company standards.

- **King's BierHaus** | *Event Director & Regional Trainer*   Feb 2016 – Nov 2020

Responsible for direction, planning, coordination, and management of private and corporate parties, catering, and special events. Lead training and management for three newly developed locations to emphasize success in culture and systems.
